Scales and Weighing Solutions

BAYKON
Industrial Weighing Systems

Sector leader...

Global Endüstriyel Tartım sektörünün önde gelen şirketlerinden biri olan BAYKON;

- ✓Basit endüstriyel tartımlardan, gelişmiş tartım çözümlerine kadar geniş ürün yelpazesi,
- ✓Uluslararası akreditasyon ve sektörel sertifikasyonlar,
- ✓Konusunda deneyimli ve eğitilmiş personeli ile sınırsız destek,
- ✓Dünya çapında deneyime sahip, 90'dan fazla ülkeye ihracat yapan bir firmadır.

1987 yılından bu yana endüstriyel tartı aletleri üreticisi BAYKON, ürün kalitesi, uluslararası deneyim, teknik yenilik, hızlı ve etkili müşteri desteği anlayışı üzerine kurulmuştur.

Tartım uygulamalarınıza ve çözümlerinize verimlilik, kalite ve sistem güvenliği entegre ederek endüstriyel tartım ürünleri sunar. En güncel teknolojiyi kullanan deneyimli ve iyi eğitilmiş ekibimiz, son teknoloji tartı aletleri geliştirmekte ve üretmektedir. Çözüm amaçlı proje takımımız, yenilikçi ürünler ve kullanıcıya özel çözümler geliştirerek müşteri taleplerini karşılar.

Laboratory Instruments

Advanced Technology, Economy and Accuracy...

High speed measuring cell and advance data processing technology, wide measuring range from 0,1 µg to 52 kg. Various models; from low cost to models compatible with GMP/GLP regulations with touchscreen color LCD display. Automatic internal calibration by time or changes of environmental conditions. Strong Connectivity option for all type of peripherals and measuring accessories

Laboratory Balances

Micro and Ultra-Micro Balances

- Various capacities starting from 0,1 µg accuracy
- Automatic internal calibration
- 5,7" touchscreen color monitor
- Various weighing procedures for your process
- Pipet calibration, filter weighing
- Automatic right and left doors
- Electronic levelling and alarm

Analytical Balances

- Various capacities starting from 0,01 mg accuracy
- Automatic internal calibration
- 5,7" touchscreen color monitor or LCD screen
- Models from basic weighing to complex applications
- Automatic right and left doors
- Electronic levelling and alarm

Precision Balances

- Various capacities starting from 0,1 mg accuracy
- Automatic internal calibration
- 5,7" touchscreen color monitor or LCD screen
- Models from basic weighing to complex applications
- Automatic right and left doors
- Electronic levelling and alarm

Pipet Calibration

Piece Counting

Data Transfer

- Balance software update
- Weighing data transfer
- Database export/import
- Balance settings export/import
- Data exchange between balances

Programmable Infrared Sensor

- PRINT function
- TARING function
- ZEROING function

Portability

- Seperable display
- Wireless communication with balance
- Wi-Fi, Bluetooth

Interfaces

- Ethernet
- 2 x USB
- 2 x RS 232C
- 4 In / 4 Out
- Wi-Fi 2,4GHz

Media Module

- Videos for User Manual, Programming and Application Functions

Moisture Analyzers

Moisture analyzer is a laboratory measuring instrument intended to determine relative moisture content in samples of different substances.

- From 50 g to 210 g capacities
- High resolution with 0,1 mg
- Up to 250 °C drying temperature
- Programmable drying modes
- Easy configuration and drying process optimization
- Effective usage with touchscreen displays
- Database for User, Product and Weighing Records
- Database import & Export via USB, Ethernet and Wi-Fi
- E2R software to access on-line info up to 100 moisture analyzers
- Drying process reports

Test Weights

From 1 mg to 1 ton, OIML Approved, Special Purpose For All Your Ettalon Weighting Needs.

High quality BAYKON mass and test weights, can fulfill your demand from 1 mg E2 up to 1 ton M3 OIML classes. You can take all service related with your mass as calibration service and accredited certificates.

Industrial Scales

Starting from regular environments to the most demanding industrial environments and the models starting from 3 kg ...

In our wide product portfolio, there is a model to meet the demand with your every application, working environment and sensitivity requirement; Up to 15,000 kg capacity and IP68 / IP69K models, in steel or stainless steel construction, fully compliant with GMP and HACCP production standards, OIML approved for commercial use.

Packing (Over/Under) Scales

Meat, fish, frozen food products, fruits, vegetables, etc.. Those food processing packaging plants is extremely easy and fast weighing

BCS21(S) Precision Balance

- Capacities: 3 kg / 6 kg / 15 kg / 30 kg
- Sensitivities starting from 0.2 gr
- OIML 6000d approved
- Stainless steel, 250 x 197 mm pan
- Easy and fast weight control LCD display with color changing
- Easy to clean ABS or IP66 stainless steel body
- Classification, control weighing and parts counting functions
- Weighing up to 90 hours with provide battery operation
- RS232C Printer / Computer connection

BCS243 Industrial Scales

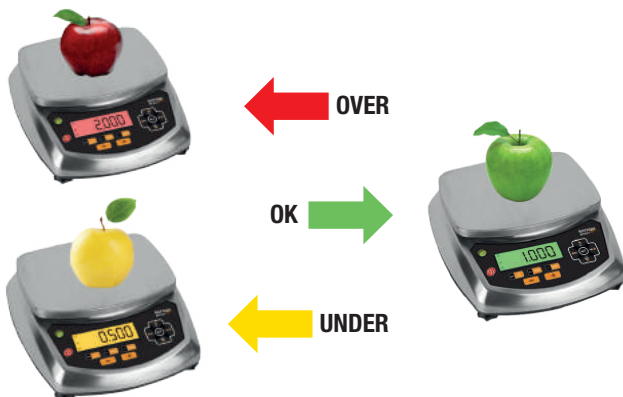

- Capacities: 6 kg / 15 kg / 30 kg
- Sensitivities starting from 0.5 gr
- OIML 6000d approved
- Stainless steel, IP66 water impermeable & washable structure
- 240 x 300 mm pan size
- Classification, control weighing, high-speed portion scales with advanced labeling functions
- Easy and fast weight control with optional LCD display or SmartBar with optional color changing
- Battery work, computer connection

BCS304 Industrial Scales

- Capacity: 30 kg
- Sensitivities starting from 1 gr
- OIML approved
- 300 x 400 mm stainless steel pan
- Selectio by field requirements
- IP30 ABS plastic with IP66 stainless steel indicator
- IP 67 painted steel or IP68 stainless steel substructure
- Classification, control weighted labeling functions
- Weighing up to 36 hours with provide battery operation, computer connection

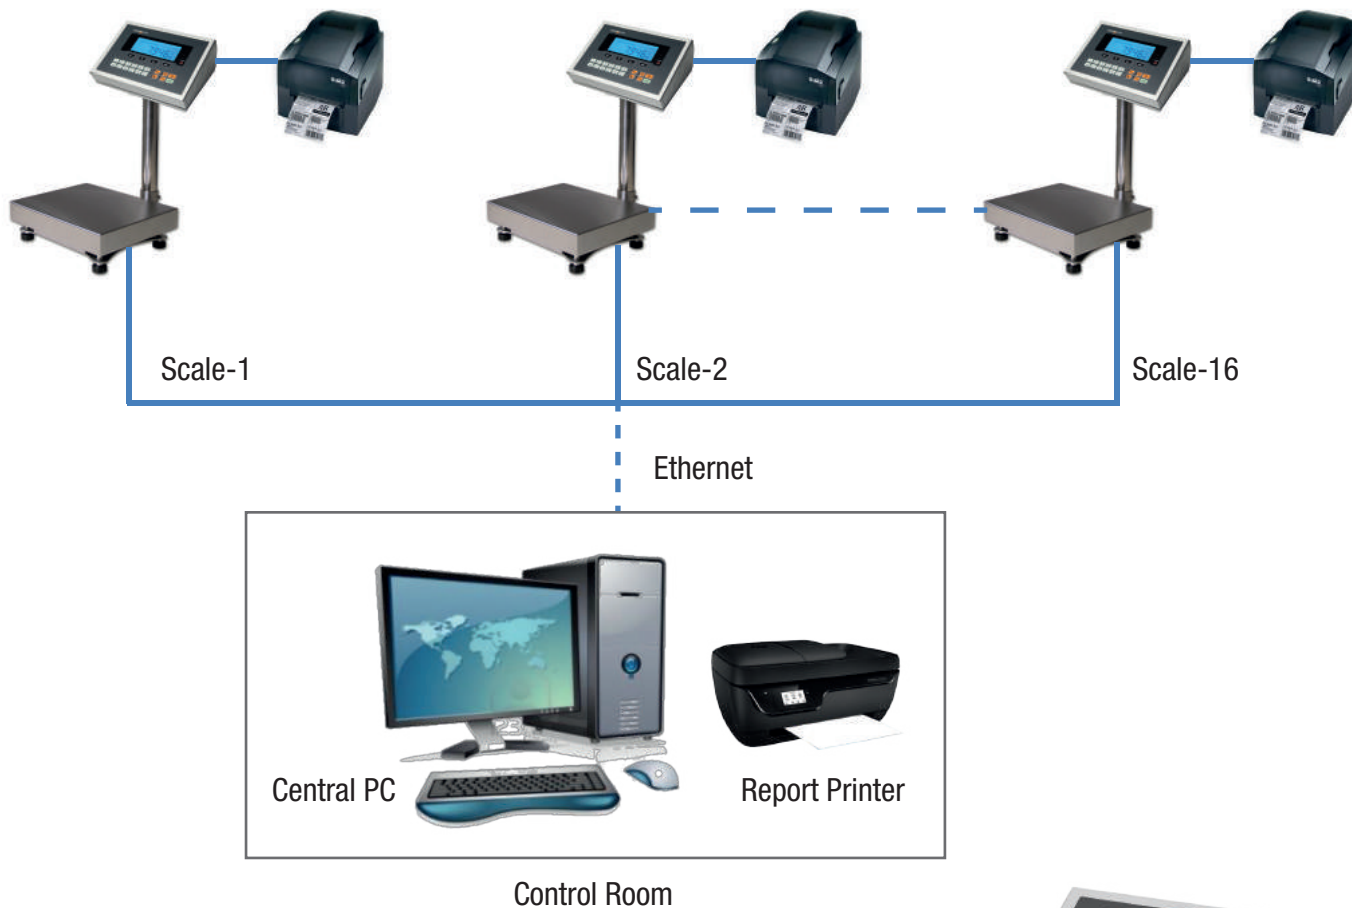

Easy Control and Classification with Color Changeable Display

Manual Packing, Labelling

Starting from regular environments to the most demanding industrial environments and the models starting from 3 kg ...

In our wide product portfolio, there is a model to meet the demand with your every application, working environment and sensitivity requirement; Up to 15,000 kg capacity and IP68 / IP69K models, in steel or stainless steel construction, fully compliant with GMP and HACCP production standards, OIML approved for commercial use.

SOFTWARE

Windows based software with following features;

- System can include up to 16 Weighing Stations with BAYKON BX25 smart indicator.
- Scales and Printer connections are via Ethernet TCP/IP.
- Active weighing stations are monitored online at PC screen.
- SQL database up to 24 fields including Product, Operator and additional free configurable entries like Batch No, Quality class, etc.
- Products field is a table includes "Code, Name, Target, Low limit, High limit and Empty Weight".

Empty Weight is the limit value which triggers packing process at BX25 indicator.

Low Limit, High Limit and Empty weight can be entered as in the following alternatives;

- 1) Absolute values like T=1000g, Low L= 950g, High L=1100g, Empty W= 200g
- 2) Differential from target like T=1000g, Low L= %5, High L=10%, Empty W= 20%
- 3) Percentage of Target like T=1000g, Low L= 0,05%, High L= 0,1%, Empty W=0,2%

Monitoring and Data Collecting System

SOFTWARE

- Operators field is a table entry as Code and Name
- Similar weighing stations are grouped under weighing station types for easy and practical field entry. Same type weighing stations have the same field entries, but, different number.
- During operation Product and Operator are entered from BX25 scale indicators
- Weighing records including Date & Time, Station Type, Station No, Gross, tare, Net, CN (Consecutive No), Product Code & Name, Operator, user defined field entries are saved in SQL Database
- Reports can be filtered based on 3 x free selected fields, Weighing Station Type, Weighing Station No and given as shift base, daily and between any 2 dates
- Special statistical reports of filtered records can be given;
 - 1) Product totals report informing number of packages, total weight, average weight and standard deviation
 - 2) Operator performance report including number of packages and average weights

Main Screen

The main screen displays the BAYKON logo and navigation buttons for Tables, Products, Records, Settings, and Shutdown. Below these are eight station control panels (1.Station to 8.Station), each showing a product name, a weight display (e.g., ----- kg), and a 'Data Entry' button. At the bottom, a table titled 'Last Weighing Records' shows the following data:

Record Date Time	Station No	Station Name	Gross	Tare	Net	CN
11.01.2018 18:30:03	Type1	1.Station	0,100	0,020	0,080	2293
11.01.2018 18:28:49	Type1	1.Station	0,285	0,020	0,265	2292
11.01.2018 18:27:32	Type1	1.Station	0,215	0,010	0,205	2288
11.01.2018 18:27:18	Type1	1.Station	0,217	0,010	0,207	2287
11.01.2018 17:18:58	Type1	1.Station	0,212	0,010	0,202	2284
11.01.2018 17:17:37	Type1	1.Station	0,212	0,010	0,202	2283
11.01.2018 17:17:13	Type1	1.Station	0,206	0,010	0,196	2282
11.01.2018 17:15:25	Type1	1.Station	0,121	0,010	0,111	2278
11.01.2018 17:15:15	Type1	1.Station	0,204	0,010	0,194	2277

The Operator Statistical Report shows a table with columns for Station, Product Code, Product Name, Product Weight, Station No, Station Name, Gross, Tare, Net, and CN. It provides a summary of weighing activities for a specific operator.

Operator Statistical Report

The Product Statistical Report shows a table with columns for Product Code, Product Name, Product Weight, Station No, Station Name, Gross, Tare, Net, and CN. It provides a summary of weighing activities for a specific product.

Product Statistical Report

The Report Form interface includes a data table at the top and a control panel at the bottom with buttons for 'Clear Filters', 'Filter Criteria', 'Product Statistical Report', 'Operator Statistical Report', and 'Export to Excel'.

Report Form

The Table Entry interface shows a 'Table Entry' window with a 'Table Entry' button and a 'Table Entry' table with columns for Name, Value, and Comment.

Table Entry

Bench / Portable Scales

BT Series Bench and Stand Scales

- Different capacities from 3 kg to 600 kg
- Measures up to 80 x 90 cm starting from 24 x 30 cm
- High precision starting from 0.5 gr, OIML approval
- According to process requirements in the field, the indicator and platform modular selection between models
- Static painted depending on working environment, stainless steel cap, galvanized or complex stainless steel
- Functions such as simple weighing, dynamic weighing, labeling, filling, control and grading, part counting, memory weighting
- Special optional features

Professional Design

Baykon BT series scales are designed to international standards for years to serve you.

Advanced Electronic Technology

High quality OIML class load cells with equipment structure Baykon's combination with weighing indicators manufactured using advanced electronic technology to provide very high weighing accuracy compared to ordinary scales.

Sensitivity in Production

Precision mechanical production is standard with laser cutting and advanced welding technology. Test and calibration steps are carefully done.

Conformity to Hygienic Conditions

For wet and washable industrial fields, IP67, IP68 and even IP69 protection class waterproof models are equipped with maximum precision and safe weighing.

Functionality

BK series scales provide ergonomic usage both with various capacity and sized weighing platforms and with their modular structure.

Powerful Options

There are some options such as; indicator pole, visor, wheeled carrying stand, mechanics such as idle roller assembly and printer, external display, software electronic options.

Floor Scales

BK Series Floor Scales

- At capacities from 300 kg to 15000 kg
- Sensitivities starting from 50 g
- From 100 x100 cm up to 3000 x 3000 cm platform dimensions
- Ground or floor useage
- Fully compatible with demanding tough conditions
- Effective use with low profile
- Painted or stainless steel construction options
- OIML approval for commercial useage
- Standard IP67 load cells
- Functional features such as labeling, formulation, recipe preparation, part counting, filling, dynamic weighing, control weighing and grading

BL Floor Scales

- 300 kg / 600 kg / 1500 kg / 3000 kg
- Sensitivities starting from 50 g
- From 85 x85 cm up to 150 x 150 cm platform dimensions
- Ergonomic using with ground and 45mm low platform height
- For effective cleaning in wet and hygienic areas lifting mechanism supported by hydraulic pistons
- Standard stainless steel and IP68 waterproof construction
- Fully compatible with GMP and HACCP production standards
- OIML approval for commercial use
- Functional features such as labeling, formulation, recipe preparation, part counting, filling

BP Floor Scales

- 300 kg / 600 kg / 1500 kg / 3000 kg
- Sensitivities starting from 50 g
- 100 x 100, 120 x 150 or 150 x 150 cm
- On-ground or indoor use
- Plunging platform cover with piston support for effective cleaning and ergonomic use in wet and hygienic areas
- Standard stainless steel and IP68 waterproof structure optional SS316
- Fully compatible with GMP and HACCP production standards
- OIML approval for commercial use
- Functional features such as labeling, formulation, prescription, parts counting, filling

Special Constructions

BU Pallet Scale

- 1500 kg and 3000 kg
- Sensitivities starting from 200 g
- Designed for weighing pallet loads
- 25 x 85 cm in dimensions, 85 mm in height
- Mobile and ergonomic usage
- Standard IP65 painted steel and optional IP68 stainless steel
- OIML approval for commercial use
- Advanced functional features such as, simple weighing, labeling, part counting, filling

BA Low- Profile Floor Scales

- 300 kg / 600 kg / 1500 kg / 3000 kg
- Sensitivities starting from 50 g
- From 85 x 85 cm up to 150 x 150 cm platform dimensions
- Ergonomic using with 45mm low platform height
- Standard IP65 painted steel and optional IP68 stainless steel
- OIML approval for commercial use
- Functional features such as, labeling, formulation, recipe preparation, part counting, filling

PS Drum Weighing Scale

- 300 kg x 100 g (Op.50 g)
- Developed for barrel weighing, battery and mobile design
- 75 x 75 cm in size
- Only 35 mm height and standard ergonomic using with ramp
- Standard IP65 galvanized steel and optional IP68 stainless steel
- OIML approval for commercial use
- Functional properties such as simple weighing, formulation, prescription preparation, filling

Monorail Scales

- 150 kg / 300 kg / 600 kg / 1500
- Sensitivities starting from 50 g
- Particularly, in weighing on carrier rail in meat centers
- Depending on the rail type, 60 cm or 120 cm in size
- Standard IP65 galvanized steel and optional IP68 stainless steel
- OIML approval for commercial use

Transpalet and Forklift Scales

You do not need to carry your pallet freight in the cage. With BT pallet truck scales or RAVAS forklift scales, you can weigh them in place and you can even weigh and print weighing paper while moving.

With the optional Wifi Bluetooth connectivity you can wirelessly transmit your scales and register your computer system.

For wet and hygienic areas, stainless steel load cell, weighing indicator and pallet compartment are available.

Customer Solutions

Special Solutions; Knowledge, Experience and Strong Technical Team Required

BAYKON, the leading company of industrial weighing systems sector, has realized solutions for every customer in almost every sector today. These solutions were entirely implemented by BAYKON as interface, program, maintenance and service for projecting, product selection, assembly, commissioning and calibration, automation and ERP integration.

Block Rotary Winding System

Function of the system: To prepare the rolling rollers requested by the customer, to monitor the production, to record the production records in the company ERP system, to generate detailed production reports.

- Stainless steel, dirt-repellent and easy to clean structure, it complies with ISO 22000 HACCP food safety management system.
- Weighing indicator with 10 "color LCD grayscale display that guides operator in stainless steel, IP69 pressure washable standard
- Provides fast and practical production possibility with the ergonomic design that 4 staff can work at the same time.
- Audible and illuminated weight control, the rolling rollers are wrapped in demanded weights so your client's expectations are fully met.
- At the end of the roll, the customer can print specially designed bar code label.
- With the Ethernet connection, the production program can be transferred to the rotary winding system by accessing the remote devices remotely and production follow up can be provided during the operation. Thus, production is controlled at every stage and production faults are prevented.
- Detailed reports on the records transferred to the customer's ERP system can be used to monitor production and outage weights, employee performance records, and provide instant and detailed cost control.

Fish Classification

Fish classification system is produced for a fish farm. Fish are automatically weighed as they pass over a conveyor, graded according to their weight, and directed to 5 separate pools. The system, conveyor and sorting mechanism, measurement and electronic units were designed and produced by BAYKON.

Strap and Wall-Type Special Scale

Especially designed for meat and fish sector, ergonomic workable models that can be connected to the wall and column.

Tank, Reactor, Silo Scales

Convert your Tank, Reactors or Silos Into a Scale...

You can place the load cell to your tanks, silos and reactors under the foot. You can continuously monitor the raw materials and finished product weights you store. By integrating them into your ERP, DCS / Scada system, you can manage your stocks, goods purchases and shipments and production with maximum efficiency.

- Sensitive solutions of weighing from 10 kg hopper to 500 tons silo
- IP68 / IP69 options for corrosive, wet and hygienic environments
- Strong System Integration;
 - 4-20mA, 0-10 V Analog output
 - RS-232C / RS 485
 - Modbus RTU, Modbus TCP
 - Ethernet TCP/IP, EtherNet/IP
 - EtherCAT
 - Profibus, Profinet
 - CANopen
 - CC-Link

With advanced BAYKON weighing modules you can measure your tank and reactors precisely and safely. With your scale reactors, you can weigh the components in your production prescriptions while weigh them directly into the reactor, instead of weighing them in a place scale. This makes your weighing process extremely easy and fast, giving you considerable advantages in the efficiency of your production process.

Formulation / Receipt Preparations

Reliable and Accurate Weighing For Perfect Receipt Formulation

- Multi scales solution including high accuracy precision balances
- Operator prompting, entering receipt, product, quality no, operator data, etc. via barcode readers
- ERP system integration for orders, receipt data and transferring weighing data
- Detailed reports
- Configurable receipt labels including barcodes
- Hardware compatible with wet and hygienic environment

Central PC / System

Production Place

Operator prompting & data control

The operator is prompted through related messages on weighing terminal to enter data such as receipt code, product name and code analyze code, operator code, etc. during formulation steps. Data entered via keys or barcode scanners is checked and error messages are given in case of wrong entry. The process cannot go forward until correct data entered or status such as weighing in predefined tolerances satisfied.

Graphical weight indication - DeltaTrac

For easy and error free working conditions, weighing is graphically indicated on weighing terminal screen; target and tolerance signs are shown and weight bar moves depending on the weight value. The operator directly follows the weight bar and performs weighing as placing the weigh bar between tolerance signs. The process does not go next step unless the weight bar is between tolerance signs.

Receipt ticket and reporting

The receipt ticket including date, time, receipt data, material data and weighing data is given at the end of formulation process. Receipt, batch and similar barcodes are printed to trace prepared formulation in production stages. Receipt data including weight is transferred to ERP systems for detailed reports and to update production, material usage and stock data.

Labeling and Data Collection

Design Your Own Label Yourself

Easy and practical “do it yourself” solution for even very complex and complicated labels.

BAYKON windows based software offers you powerful and flexible facilities for weighing and labeling, data collection and reporting.

BAYKON Data Collection, Labeling and Reporting Software

- Weighing menu is configured directly by the user. Multi language weighing menu can be defined.
- The user can design his own label by mouse and save it in the label directory. Actual label is selected through weighing menu from the label directory.
- Data is entered via keys or bar code readers. Predefined tables and codes are used for easy and error free data entry.
- Bar codes are defined by user and printed as different bar code types.
- Detailed reports can be sorted.
- Automatic and manual data export. Data to be exported is defined by user.
- Automatic labeling for automatic weighing is available.
- Counting function is available.

Automatic Filling Systems

Confirmed Tin, Barrel and Container Filling Systems for Commercial Applications

Modern filling machines use advanced electronic technology, so filling accuracy and speed are extremely high. BAYKON will produce the optimum solution for you, for all kinds of weighing and liquid filling problems.

- Confirmed for commercial applications according to the relevant regulations
- High sensitivity and filling speed
- Automatic tare control
- Adaptive, tank level, temperature and viscosity changes are automatically monitored and the cutoff values are set automatically.
- Suitable for corrosive, wet and hygienic environments

Tin Filler

- Designed for standard tins.
- There are options to fill in from the inside or from the bottom.
- Filling bags for 60 kg or over
- Easily adjustable to the desired height.

Single Barrel Filling

- The barrel can be easily placed low-weight platform.
- The barrel can be down loaded via a small angle
- For bubbling material there is a filling option from below.

Quadruple Barrel Filling

- Four barrels are filled in sequence on a single weighing platform.
- For bubbling material there is a filling option from below.
- The weighing platform can be inside the floor or on the ground.
- It can be taken from pallet filling point by moving roller system.

Filling Systems For Dust and Granule Materials

Different type of filling processes are applied according to the materials types and filling constructions; weighing into a container and emptying, weighing during discharging, discontinuous weighing and totalizing, etc... Based on its know-how, technical experience and powerful products portfolio, BAYKON will develop you the best solution

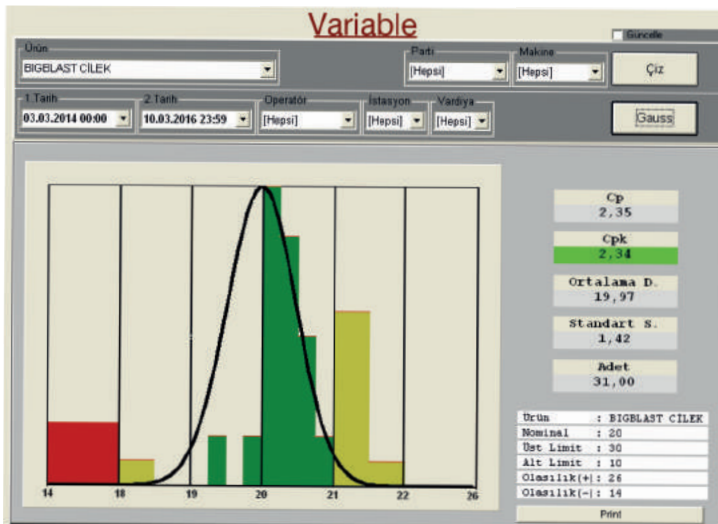

Baykon SQC® Statistical Quality Control

Your Packaged Products Are Under Control

Baykon SQC® Statistical Quality Control – SQC software which is a multi user quality system connected to an MS SQL server. It provides you to control net content of your pre-packaged products during filling and packing processes, to save weighing records automatically and to enable you informative reports and statistical evaluations from the rugged SQL database.

With the help of Baykon SQC®, you can fulfill legal requirements of e-marking directives, prevent your risks caused by less or more fill quantities. Controlling product lost will provide rapid payback.

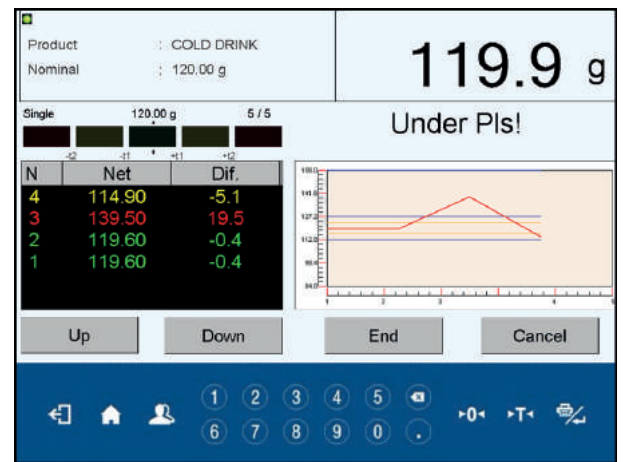

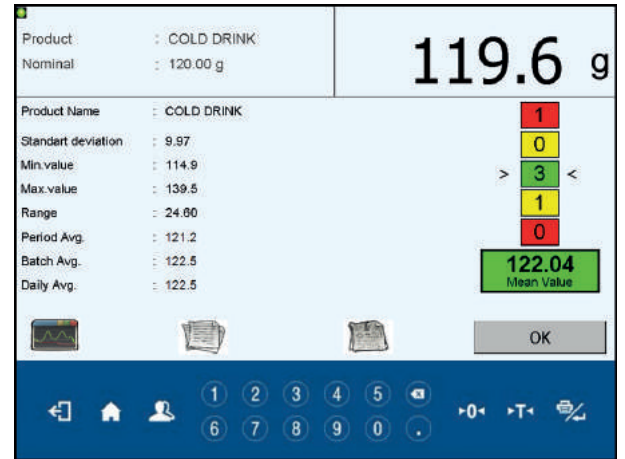

Baykon SQC® Software

- Provides reliable net content control of your products during filling and packing processes
- Automatically saves weighing records for traceability
- Helps you to fulfill legal requirements
- Produce statistical reports including average weight, standard deviation
- Guides filling operators to adjust machines to prevent less or more fill quantities.
- Creates records to analyze filling performance of your machines

Baykon SQC Computer based SQC- Statistical Control System

Filling operator enters his password via PUE HY10 terminal's touch screen LCD monitor, selects product code or name, enters batch no, machine code and starts sampling. Operator is guided by proper messages on PUE HY10 monitor along sampling steps. Result of sampling is given to the operator and saved in SQL server. Results of sampling process as graphic and texts are followed on main PC and monitoring PC screens in production and/or quality managers. Various type of reports are given.

Each sampling result appears automatically on PC screen in Production and/or Quality manager's desk. Acceptable out of tolerance results colored with YELLOW and unacceptable results colored with RED lines. Individual sampling values are shown if the respective sampling line is double clicked.

Weighing records in any entered two dates are filtered by various user's defined criteria such as product, batch, machine, operator, etc. Filtered records can be printed on report printer or exported as text/Excel file.

Instead of all sampling records, only records with non-conformities can be indicated on PC monitors. Thus, production/quality manager will immediately notice the related problem and filling process will be followed in time.

Automatic Weighing Scales/Checkweigher

%100 Control

Baykon and Radwag checkweighers have been designed to meet the highest demands of users. Not only do they ensure control and optimization of the production process but also minimise loss and provide significant cost reductions.

Compact design allows space saving in your production area and complies with hygiene standards with easy to clean stainless steel structure.

The Highest Weighing Precision and Mass Control

- 0,01 g accuracy
- Electromagnetic module developed by Baykon

Throughput and Speed

- Shorter operating time-greater line productivity
- Minimisation of production downtime
- Economy-raw material loss reduction.

Reliable Production

- HACCP (Food industry approval) for direct contact with food products
- Rejection of non-tolerance products
- Use of metal detector to remove metallic parts in the product

Control Process Management E2R System

- Option of creating multi-workstation networks
- Keeping records of data stored in scales
- Exporting data to external system

Accordance with the quality standards

- MID-directive on measuring instruments. OIML R51-in accordance with the test procedures
- HACCP- system of hazard and critical control points analysis
- PGC- accordance with the legal requirements of Packaged Goods Regulation.
- GMP-Good Manufacturing Practice
- FDA-US Food and Drug Administration

High Quality

- IP67 protection rate.
- Materials: AISI 304 or AISI 316 steel.
- Quick assembly and installation
- The maintenance and cleaning process of the mechanical parts is simple and fast
- Components protected against adverse external conditions.

Vast Range of Functions

- Data control and protection
- Customisation of the control type according to user demands.
- 100% control of products.
- Batching processes control via feedback
- Alibi storage
- Interfaces: Ethernet, Profibus, USB, Wi-Fi
- Multilingual, intuitive menu of the device.
- Multi-product.

Rotational Scales for Cylindrical Products

The scales are intended for controlling single loads of cylindrical items (jars, tubes, sprays, aerosols, bottles)
The checkweigher construction makes it a perfect solution for all the products with a small diameter of the base and a high centre of gravity.

Special Design for Biscuit and Confectionery Industry

The scales are mostly intended for weighing wafers. Special construction, where the weighing module is mounted over the conveyor line, keeps it clean (wafer, toppings and cream leftovers fall into the container placed under the conveyor)

Characteristics

- Type approval conformable to MID directive.
- Tests in accordance with OIML R51
- AISI 304 or AISI 316 stainless steel design.
- Food industry attestation for direct contact with food products.
- Possibility of seamless integration of the checkweigher into existing production lines.
- Open construction, easy maintenance and cleaning.
- Wiring system designed inside conveyor frames.
- Quick disassembly of weighing pan shielding.
- Anti-draught shielding of the weighing belt (in accordance with industrial safety regulations)
- Lockable storage bin (conformable to HACCP)
- Extra conveyor systems for optimal product distribution.
- Static side guides system and mechanically driven guides system.
- Pressure control, line jam sensor and bin over-load sensor complete system of auto diagnostics.
- Continuous control of all scales systems.
- Online monitoring of the technological process.

Metal Detection

Installation of the tunnel metal detector allows detection of any impurities in the weighed products. Metal and metal compounds detection is carried out, in motion. Therefore, there is no need for stopping the conveyor belt. The report on the detector operation and the weighing report on the product series are combined.

Rotational feeder of cylindrical products

Side guides system for transporting bottles

Tunnel metal detector
